## Project Service Process

We coordinate bottle selection, components, decoration, sampling and delivery according to brand needs.

Requirement    ›    Bottle / Components    ›    Decoration    ›    Sample    ›    Mass Production

## R&D & Custom Development

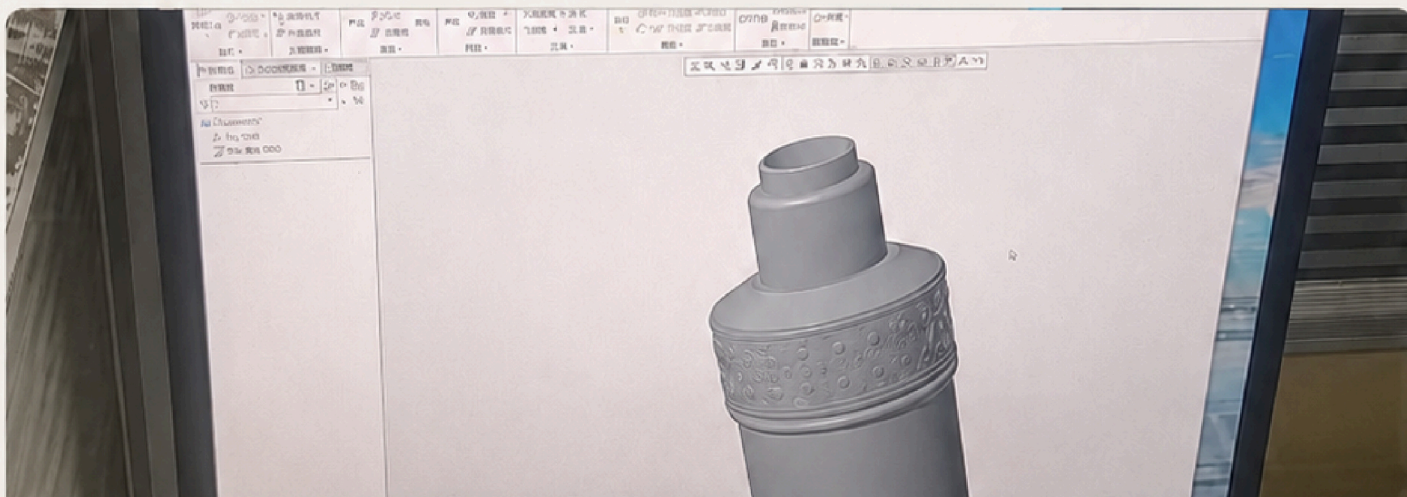

From structure modeling to sample validation, reducing matching risks

3D Design Review

Physical Sample Confirmation

CAD Engineering Support

### Custom Development Process

Requirement > 3D Review > Mold / Sample > Decoration > Mass Production

Pre-validation helps reduce compatibility risks among bottles, caps, pumps and decoration.

Cooling / Transfer

Inspection

Post-processing

# Injection Molding & Mold Development

Injection equipment · Mold management · Component production

Injection Molding Workshop

Mold Inventory

Raw Materials & Supply

Component Handling Line

## Mold & Production Coordination

Mold preparation, injection molding, component handling and subsequent assembly are coordinated for production.

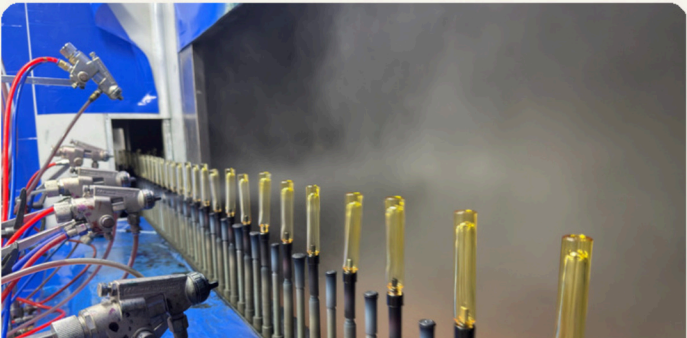

# Automatic Coating

Real coating environment & equipment · Batch surface finishing

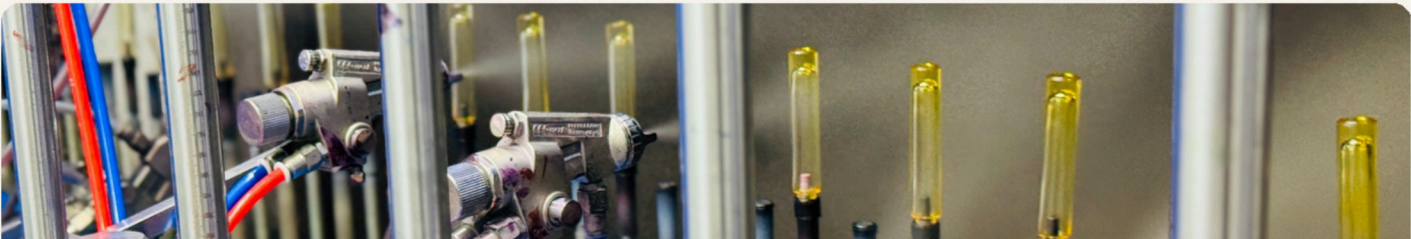

Coating Equipment & Production Area

Automatic Coating Station

Manual Spraying / Sampling

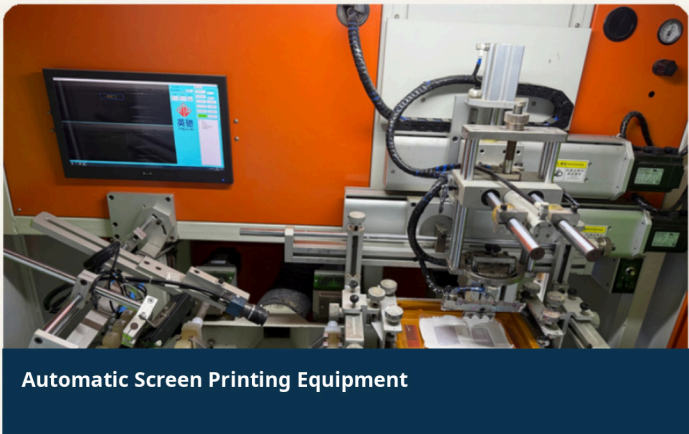

Coating Details

# Automatic Screen Printing

Clean printing area · Automated equipment · Stable positioning

# Clean Production & Material Flow

Real production area · Zoning · Clear aisles

## Environment & Flow Management

Zoning, tray management and clear aisles reduce material mixing and improve production efficiency.
